4. others

4.1 Ascend physical machine installation Cann and MindSpore environment guidance

4.2 Pre -reading and resource preparation

1. Log in to the fortress machine or physical machine of the Shengteng chip

Log in to a fortress machine needs to contact the administrator to get the corresponding resources

1. Download the dependency package in advance (see the correspondence and download address below for the version of the version)
2. Ubuntu 20.04 ISO installation package
3. Cann and its kernel
4. Anaconda installation supporting MindSpore environment

4.2.1 VPN opens the network of the fortress machine

(1). VPN connecting the Shengteng community can access the fortress machine in Hangzhou

according to [Shengteng Ecological Intelligence Laboratory Network Connection Guidance](#), Import configuration files to connect to the first layer of VPN.

If the CMD can Ping Fortress IP indicates that the network has been opened, you can use MobaxTerm to log in to the fortress machine.

(2). Dongguan-Tuanbo Waka's fortress machine also needs to connect the second layer of VPN

according to [The network environment VPN connection guidelines for Dongguan-Tuanpububi Machine](#) after completing the network environment configuration, you can log in to the fortress machine.

4.3 IBMC installation operating system and NPU driver firmware

The basis is whether the command can be executed.

← → ↻ 🔒 Not secure https://8.92.8.217/#/sysManage/infoPreview/processor

The screenshot displays the iBMC web interface with a sidebar menu on the left containing: System Info, Performance Monitoring, Storage Management, Power, Fan and Heat Dissipation, and BIOS Settings. The main content area is divided into sections for NPU5, NPU6, NPU7, and NPU8. NPU5 and NPU6 details are visible, including Name, Manufacturer (HiSilicon), Model (Ascend 910 B), Power (72 W and 73 W respectively), Firmware Version, and DIE ID. A terminal window is overlaid on the NPU5 section, showing the following commands and outputs:

```
msec0@msec0:~$ lspci | grep d801
01:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
02:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
04:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
04:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
08:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
08:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
c1:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
c2:00.0 Processing accelerators: Huawei Technologies Co., Ltd. Device d801 (rev 20)
msec0@msec0:~$ npu-smi info
npu-smi: command not found
msec0@msec0:~$
```

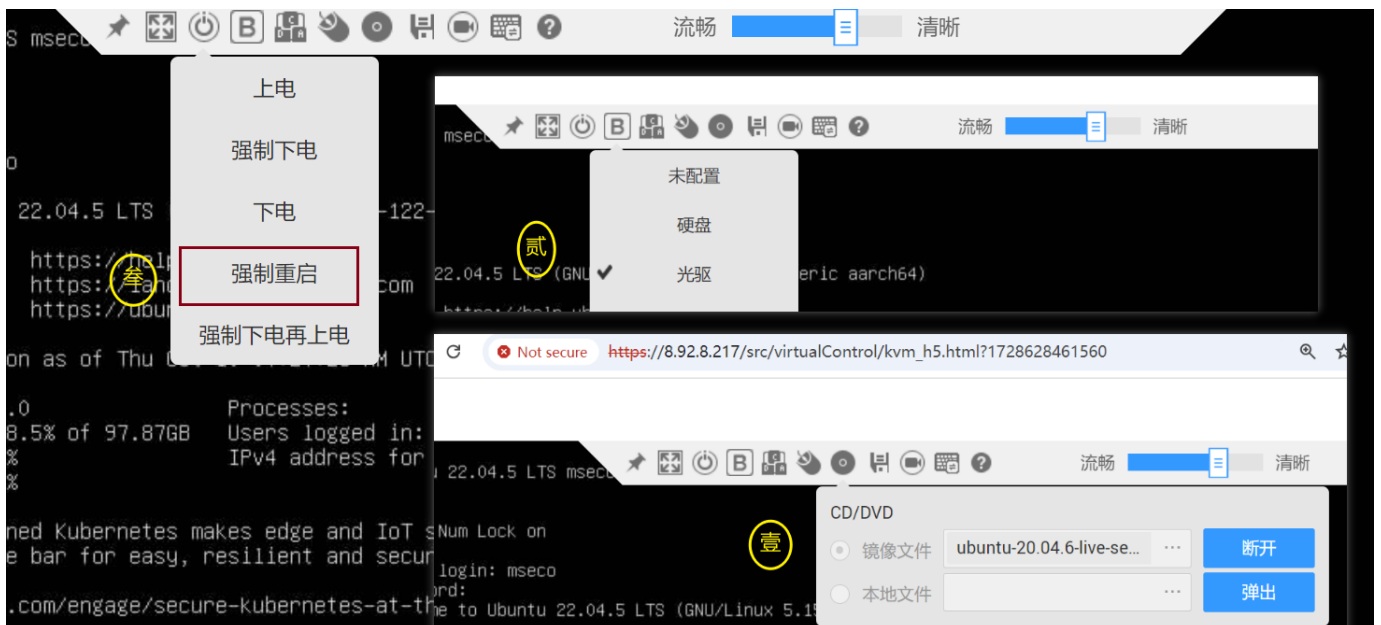

Try to use the operating system version and the corresponding firmware that HDK teams have been developed, check the details [Official website document "Version Support Form"](#) there is no guarantee outside the "Version of the Facial Form". The user needs to install the front dependencies by themselves to resolve the conflict and the source code to compile the NPU driver and firmware. As of 2024.10.11, the kernel 5.15.122-GENERIC Ubuntu22.04 source code compilation and adaptation problem, other systems are similar to similar. According to [Altas800 \(9000\) official tutorial installation documentation](#) it is recommended to use the operating system version corresponding to the NPU -driven firmware in the "Version of the Edition" uses binary installation. It is not recommended to install the source code.

```

4.3.1 Recommended NPU driver and firmware on Ubuntu 20.04

Install ubuntu20.04 operating system

Most of the installation tutorial in Ubuntu can be operated

```

mseco@mseco:~$ sudo vim /etc/ssh/sshd_config
mseco@mseco:~$ sudo service sshd restart
mseco@mseco:~$
mseco@mseco:~$ #LoginGraceTime 2m
mseco@mseco:~$ #PermitRootLogin prohibit-password
mseco@mseco:~$ PermitRootLogin yes
mseco@mseco:~$ #StrictModes yes
mseco@mseco:~$ #MaxAuthTries 6
mseco@mseco:~$ #MaxSessions 10
mseco@mseco:~$
mseco@mseco:~$ #PubkeyAuthentication yes
mseco@mseco:~$
mseco@mseco:~$ # Expect .ssh/authorized_keys2 to be disregarded by default in future.
mseco@mseco:~$ #AuthorizedKeysFile .ssh/authorized_keys .ssh/authorized_keys2
mseco@mseco:~$
mseco@mseco:~$ #AuthorizedPrincipalsFile none
mseco@mseco:~$
mseco@mseco:~$ #AuthorizedKeysCommand none
mseco@mseco:~$ #AuthorizedKeysCommandUser nobody
mseco@mseco:~$
mseco@mseco:~$ # For this to work you will also need host keys in /etc/ssh/ssh_known_hosts
mseco@mseco:~$ #HostbasedAuthentication no
mseco@mseco:~$ # Change to yes if you don't trust ~/.ssh/known_hosts for
mseco@mseco:~$ # HostbasedAuthentication
mseco@mseco:~$ #IgnoreUserKnownHosts no
mseco@mseco:~$ # Don't read the user's ~/.rhosts and ~/.shosts files
mseco@mseco:~$ #IgnoreRhosts yes
mseco@mseco:~$
mseco@mseco:~$ # To disable tunneled clear text passwords, change to no here!
mseco@mseco:~$ #PasswordAuthentication no
mseco@mseco:~$ PasswordAuthentication yes
mseco@mseco:~$ #PermitEmptyPasswords no
mseco@mseco:~$
mseco@mseco:~$ # Change to yes to enable challenge-response passwords (beware issues with
mseco@mseco:~$ # some PAM modules and threads)

```

After the MOBAXTERM connection

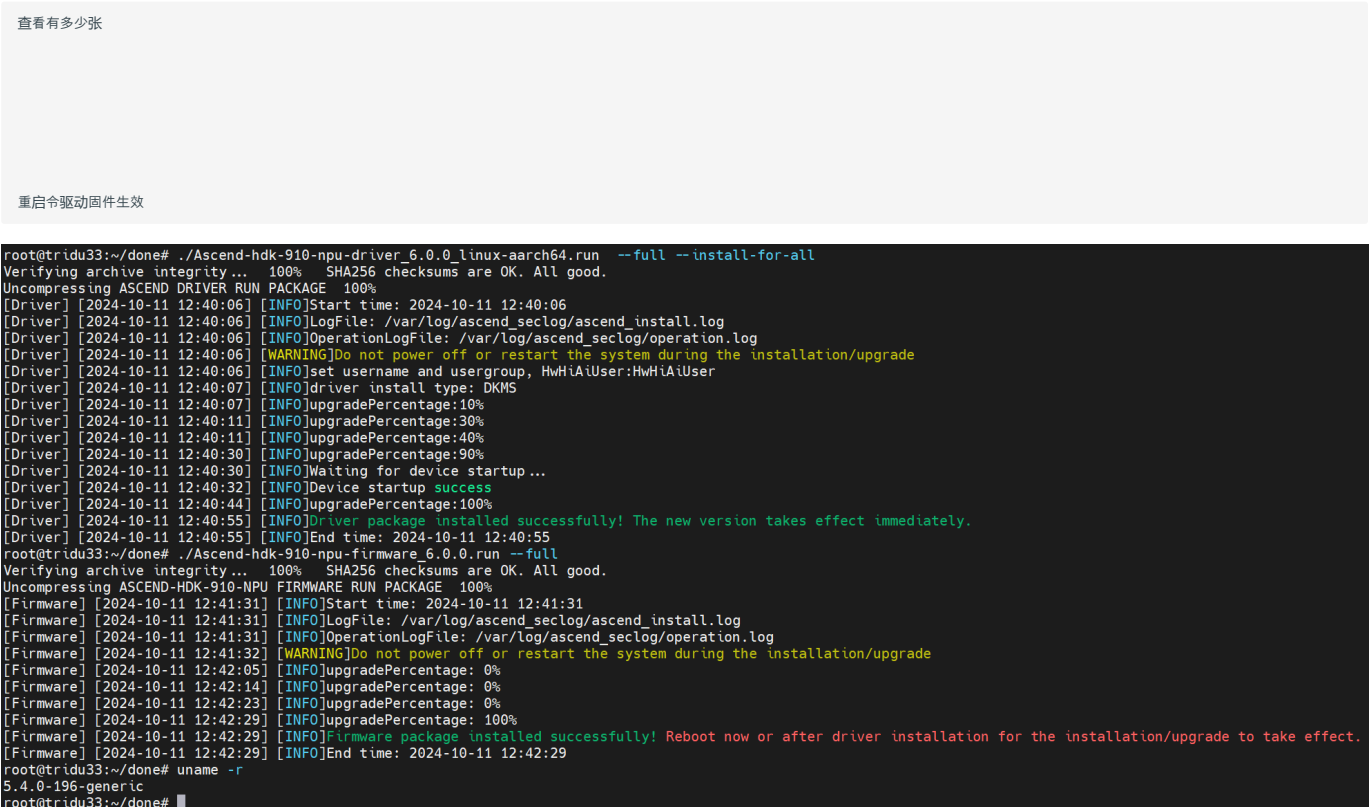

Install NPU driver and firmware

IBMC can directly view the NPU model,

then go to the rising page to find the corresponding version of the installation document.

The kernel version will be automatically upgraded, and the current kernel version is not adapted to the current kernel version upgrade. Therefore, the function of automatic upgrade kernel can be turned off.

report an error, according to the tutorial <https://bbs.huaweicloud.com/blogs/423686> Set white

```

root@tridu33:~# uname -r
5.4.0-196-generic
root@tridu33:~#
root@tridu33:~# cat /etc/default/grub
# If you change this file, run 'update-grub' afterwards to update
# /boot/grub/grub.cfg.
# For full documentation of the options in this file, see:
#   info -f grub -n 'Simple configuration'

GRUB_DEFAULT="Advanced options for Ubuntu>Ubuntu, with Linux 5.4.0-125-generic"
GRUB_DEFAULT=0
GRUB_TIMEOUT_STYLE=hidden
GRUB_TIMEOUT=0
GRUB_DISTRIBUTOR=`lsb_release -i -s 2> /dev/null || echo Debian`
GRUB_CMDLINE_LINUX_DEFAULT=""
GRUB_CMDLINE_LINUX=""

# Uncomment to enable BadRAM filtering, modify to suit your needs
# This works with Linux (no patch required) and with any kernel that obtains
# the memory map information from GRUB (GNU Mach, kernel of FreeBSD ... )
#GRUB_BADRAM="0x01234567,0xfefefefe,0x89abcdef,0xefefefef"

# Uncomment to disable graphical terminal (grub-pc only)
#GRUB_TERMINAL=console

# The resolution used on graphical terminal
# note that you can use only modes which your graphic card supports via VBE
# you can see them in real GRUB with the command `vbeinfo'
#GRUB_GFXMODE=640x480

# Uncomment if you don't want GRUB to pass "root=UUID=xxx" parameter to Linux
#GRUB_DISABLE_LINUX_UUID=true

# Uncomment to disable generation of recovery mode menu entries
#GRUB_DISABLE_RECOVERY="true"

# Uncomment to get a beep at grub start
#GRUB_INIT_TUNE="480 440 1"

```

Then restart

```
root@tridu33:~# npu-smi info
```

npu-smi 22.0.4		Version: 22.0.4				
NPU Chip	Name	Health Bus-Id	Power(W) AICore(%)	Temp(C) Memory-Usage(MB)	Hugepages-Usage(page) HBM-Usage(MB)	
0	910B	OK	71.2	44	0	/ 0

1	910B	OK	66.2	39	0	/ 0
0		0000:81:00.0	0	1240 / 15137	0	/ 32768
2	910B	OK	68.0	38	0	/ 0
0		0000:41:00.0	0	2409 / 15137	0	/ 32768
3	910B	OK	67.3	43	0	/ 0
0		0000:01:00.0	0	2345 / 15039	0	/ 32768
4	910B	OK	70.2	42	0	/ 0
0		0000:C2:00.0	0	751 / 15137	0	/ 32768
5	910B	OK	66.2	38	0	/ 0
0		0000:82:00.0	0	2297 / 15137	0	/ 32768
6	910B	OK	68.8	39	0	/ 0
0		0000:42:00.0	0	2254 / 15137	0	/ 32768
7	910B	OK	68.1	44	0	/ 0
0		0000:02:00.0	0	1302 / 15039	0	/ 32768

This shows that there is no problem with the driver, you can continue to check

4.3.2 Supporting Cann and Kernel

Establishing necessary dependent components

After the installation, you can print the environment variables to see if the value is written correctly. If not, you need to write it yourself or the

You can install Python3.7.5 according to the tutorial, or you can install the environment of anaconda or miniconda. I use Anaconda as an example here.

Configure Huawei source as follows

You can install these front tools.

4.3.3 Install MindSpore

It is recommended to use anaconda, or you can use Ubuntu native PIP+Python environment to install MindSpore.

<! ---->

1. Verify Ubuntu, Cann, MindSpore version supporting relationship
2. Check [Can MindSpore use the GPU normally?](#),

the figure below is the command to check whether the NPU is used normally:

```
(base) root@tridu33:~/temp# conda env list
# conda environments:
#
base                * /root/anaconda3
pt1.8.1             /root/anaconda3/envs/pt1.8.1
py37                /root/anaconda3/envs/py37
py37ms1.10.1        /root/anaconda3/envs/py37ms1.10.1
tf1                 /root/anaconda3/envs/tf1
tf2                 /root/anaconda3/envs/tf2

(base) root@tridu33:~/temp# conda activate py37ms1.10.1
(py37ms1.10.1) root@tridu33:~/temp# python -c "import mindspore;mindspore.run_check()"
MindSpore version: 1.10.1
The result of multiplication calculation is correct, MindSpore has been installed successfully!
(py37ms1.10.1) root@tridu33:~/temp# touch test_ms.py
(py37ms1.10.1) root@tridu33:~/temp# vim test_ms.py
(py37ms1.10.1) root@tridu33:~/temp# python test_ms.py
[[[2. 2. 2. 2.]
  [2. 2. 2. 2.]
  [2. 2. 2. 2.]]

[[2. 2. 2. 2.]
 [2. 2. 2. 2.]
 [2. 2. 2. 2.]]

[[2. 2. 2. 2.]
 [2. 2. 2. 2.]
 [2. 2. 2. 2.]]]]
(py37ms1.10.1) root@tridu33:~/temp# cat test_ms.py
import numpy as np
import mindspore as ms
import mindspore.ops as ops

ms.set_context(device_target="Ascend")
x = ms.Tensor(np.ones([1,3,3,4]).astype(np.float32))
y = ms.Tensor(np.ones([1,3,3,4]).astype(np.float32))
print(ops.add(x, y))
```

'Device_target' parameters are \['cpu', 'gpu', 'ascend', 'davinci'], Davinci is the old name of Ascend.

4.3.4 Q & A

1) When the third-party SSH client logs in Linux instance, it prompts "Access denied" the reason why the error is possible: - SSH login account password input error;

- MacBook or Windows keyboard layout or input method of lax and special character transition causes password errors.

```

mseco@mseco:~$ # some PAM modules and threads)

```

2) After installing Ubuntu

Without the correct setting of the network, refer to the IBMC network configuration when it is recommended to reinstall OS. Correctly set the network card:

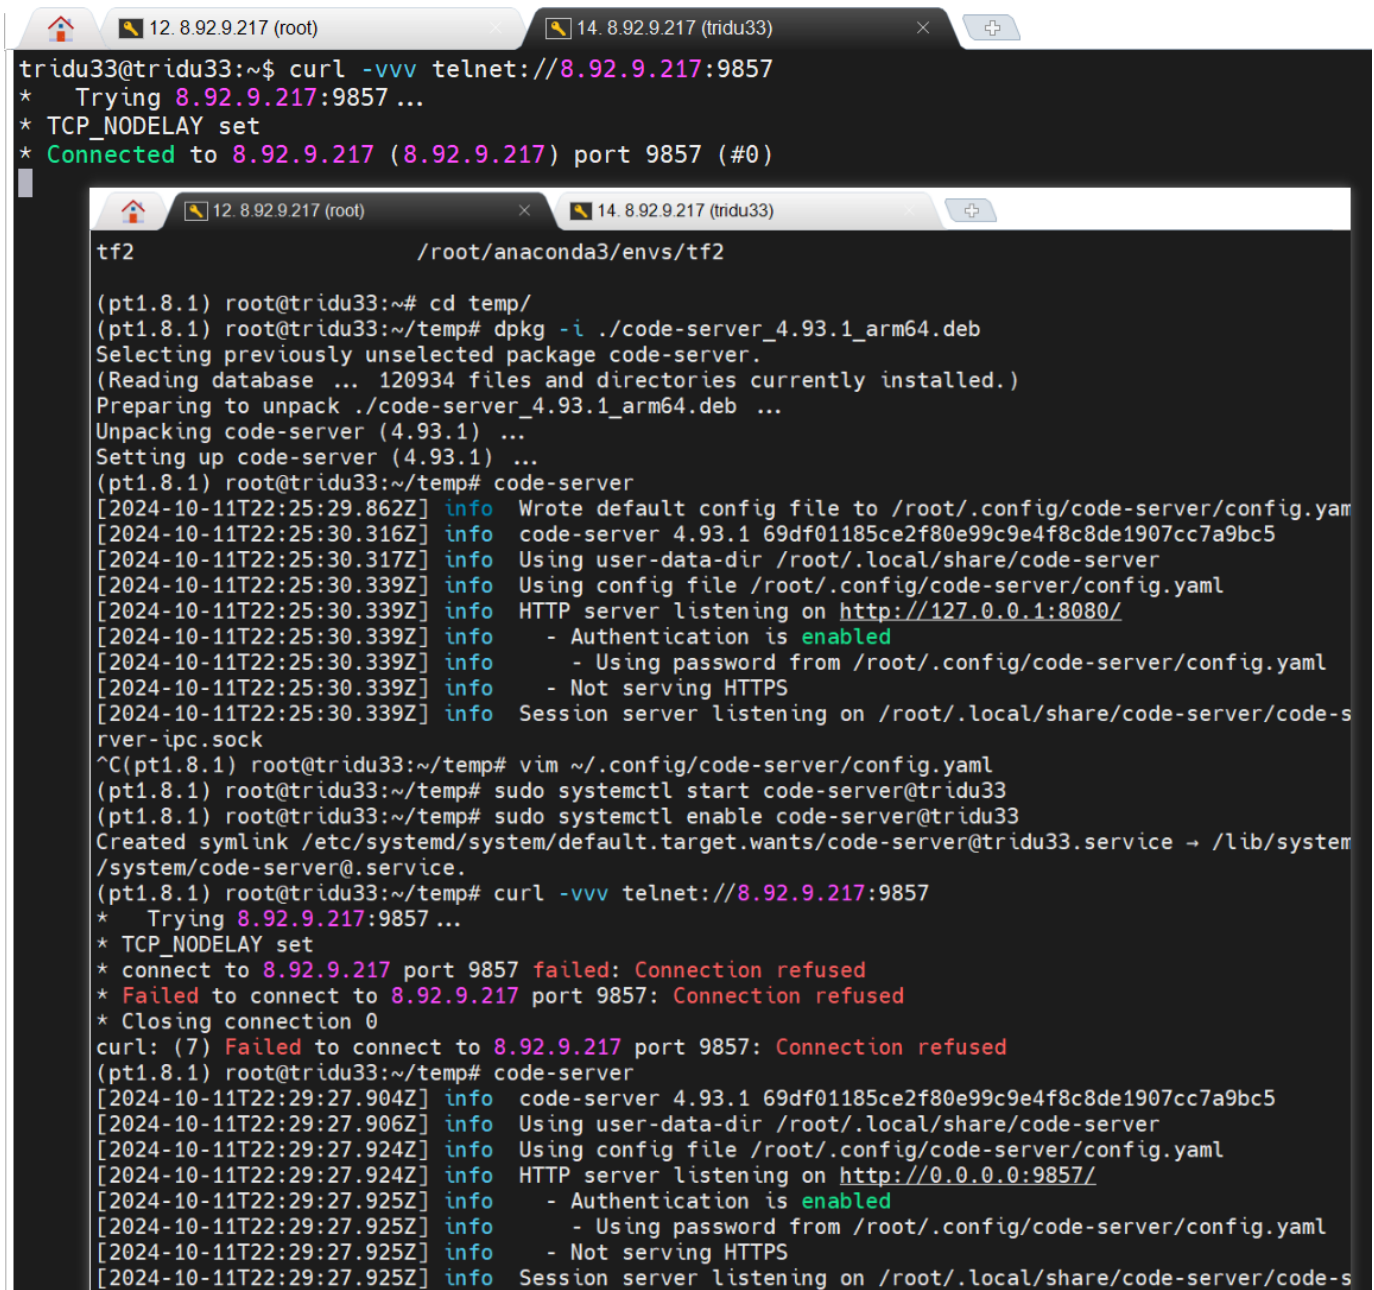

After turning on, you can check whether the IP of the network card is set correctly

```
mseco@mseco:~$ sudo apt-get install -y net-tools pciutils
Reading package lists... Done
Building dependency tree... Done
Reading state information... Done
net-tools is already the newest version (1.60+git20181103.0eebece-1ubuntu5).
pciutils is already the newest version (1:3.7.0-6).
0 upgraded, 0 newly installed, 0 to remove and 2 not upgraded.
mseco@mseco:~$ ifconfig

```

At this time, the local can be connected and developed remote Visual Code

Do not set the SystemCTL automatic background startup (it will automatically restart many background services), every time Mobaxterm is used in TMUX, manually enter local development. **Not recommended "Version Supporting Table" Os Outside OS Source Code Compile NPU Driver and firmware.**
